u.r. = underrepresented; ü.r. = overrepresented; k = counted without pollen from nectarless plants (P)

\*HD = Honeydew; \*\*Starchgrains in % per 300 pollen- and starchgrains counted

^Weighing, ^^Extraction, HPLC conditions, smaller scope,

^^^Adjustment in volume and temperature, ^^^Matrix: only Honey

The expanded relative measurement uncertainty is 10 % (electr. conductivity); 4 % (Fructose); 4 % (Glucose); 8 % (F/G) (coverage factor k=2.58; confidence interval 99 %) without taking the sampling into account.

**Conclusion:**

Based on the results determined within this analysis the honey can be classified as Blüten/Blossom honey according to the current EC-Directive for Honey Art.1, Annex I.

Based on the above determined characteristics a declaration as Robinien (Akazien)/Robinia (Acacia) honey is in accordance with Art. 2 (2b) of the current EC-Honey Directive.

A declaration of the geographical origin Südosteuropa (Serbien möglich)/Southeasteuropa (Serbia possible) is consistent with the above determined pollen spectrum given current scientific research.

## VA40500 (2023-10) NMR - Honey-Profiling™, BRUKER evaluation + QSI interpretation, Authenticity and Quality

Parameter	Result
Detection of foreign sugars	Nein/No
Quality	typisch/typical
Geographical origin*	-
Botanical origin*	Acacia confirmed
Deviations/Remark	

### Accredited method

The quantitative and chemometric evaluation of the NMR-Honey-Profiling™ Release 3.1.x is performed by Bruker BioSpin GmbH (Accreditation Certificate D-PL-19229-01-00) and the expert interpretation by QSI GmbH.

The quality is evaluated according to EU Honey Directive 2001/110 (esp. HMF, ethanol (> 400 mg/kg untypical/fermentation). If foreign sugars were detected, it is automatically evaluated as untypical.

\* Statistical confirmation of origin is only made if we have information in this regard. It is based on the NMR database and does not necessarily agree with the results of a microscopic pollen analysis (reference method).

### Conclusion:

Based on the current Honey-Profiling™ database of Bruker BioSpin GmbH and the interpretation of QSI, the quality is typisch/typical for honey as defined by Annex II EU Honey Directive 2001/110. Based on the current Honey-Profiling™ database of Bruker BioSpin GmbH and the interpretation of QSI, the NMR profile gives no indication of the presence of foreign sugars. The sample meets the requirements for authentic honey according to Annex I No. 1 of the EU Honey Directive 2001/110.

The expanded relative measurement uncertainty is  $3\%$  (coverage factor  $k=2.58$ ; confidence interval  $99\%$ ) without taking the sampling into account.

## Conclusion:

The values determined in the course of the investigation carried out correspond to the QSI criteria for authentic honey and, in our opinion and according to current scientific knowledge, do not indicate the addition of foreign sugars. With regard to the investigated parameters the honey corresponds to the legal regulations (EU Honey directive 2001/110/EC, Annex 2 Part 1).

Accredited method

\* LOQ = limit of quantitation; n.n. = below LOQ

\*\* no legal limit (MRL) acc. to 470/2009/EC + 37/2010/EU: no permit for use of antibiotics in beekeeping

The expanded relative measurement uncertainty is 40 % (coverage factor k=2.58; confidence interval 99 %) without taking the sampling into account.

### Conclusion:

Under consideration of above indicated limit of quantitation this result complies with EU Regulation 37/2010 (residues of pharmacologically active substances in foodstuffs of animal origin).
